At the summer camp in Kastamonu, our group had two leaders, Pelin and Serkan. Pelin is twenty-three. She is slim, with short curly hair, and she always wears a yellow cap. She is very energetic and she woke everybody up with music at seven o'clock every morning!
Serkan is older than Pelin. He has a long beard and he is very calm. He is a better storyteller than Pelin, so we sat around the campfire with him every night. About one hundred years ago, people in Yellowstone National Park in the USA killed all the wolves. They thought wolves were dangerous because they attacked farm animals. After the wolves disappeared, the number of elk, a kind of large deer, increased. The elk ate young trees and plants near the rivers, and many birds and beavers lost their homes.
In 1995, scientists brought wolves back to the park. The wolves hunted elk, so the elk moved around more and didn't eat all the young trees. Slowly, the trees grew again, and birds and beavers came back. Today, scientists say wolves are important for the balance of nature.

Last night my family and I watched the final episode of “Bil Bakalım”, a quiz show on Channel 7. The contestant was a retired teacher from Eskişehir, Mrs. Necla. She answered eleven questions correctly. The last question was about space: “Which planet has the biggest moon?” Mrs. Necla thought for a long time and then said, “Jupiter.” She was right, and she won one million liras! Everybody in our living room jumped up. My grandpa shouted so loudly that our neighbour knocked on the door. After the show, there were too many commercials, so I went to bed. It was the best night of the week!

3. How many questions did she answer correctly?
