C The Perseid meteor shower

5 × 5 = 25 puan

Read the text. Write T (true) or F (false). *(Metni okuyun. Cümleler doğru mu, yanlış mı?)*

> Every year in August, people around the world watch the Perseid meteor shower. Meteors are not stars. They are very small pieces of rock and dust. When they enter the Earth’s atmosphere at a very high speed, they burn and make bright lines in the sky. On the best nights, you can sometimes see more than fifty meteors in an hour!
> You don’t need a telescope to watch a meteor shower; your eyes are enough. But you should go far away from city lights, because the lights make the sky too bright. Last August, Elif and her family camped near Lake Van. They lay on blankets after midnight and counted forty-three meteors. “It was the most beautiful night of my life,” Elif says.

1. You can see the Perseids every year in August. ( )

2. Meteors are small stars that fall to Earth. ( )

3. City lights make it harder to see meteors. ( )

4. You need a telescope to watch a meteor shower. ( )

5. Elif and her family watched the shower near Lake Van. ( )
