d) What is the film about?

17. Long journeys into space bring a big problem: food. Carrying enough food from Earth for a trip to Mars, which could take years, is very difficult and expensive. That’s why scientists are trying to grow plants in space. On the International Space Station, astronauts have already grown lettuce and some small vegetables using special lights and very little water. The plants don’t grow in soil but in special bags filled with nutrients. Scientists believe that if they solve this problem, long trips to other planets may become possible in the future.

What is the main topic of the text?

a) Growing food in space
b) The history of rockets
c) Life on the Moon
d) Famous astronauts

18. Why is it important to grow food in space?
