> Octopuses are some of the most amazing animals in the sea. They have eight long arms, and each arm has many suckers. They use their suckers to touch, taste and hold things. Octopuses also have three hearts and blue blood! They don’t have any bones, so they can squeeze through very small holes. Octopuses are masters of hiding. They can change the colour of their skin in less than a second. When an enemy comes near, some octopuses shoot a cloud of dark ink into the water and swim away quickly. Scientists say octopuses are very intelligent. In aquariums, they can open jars to get food inside, and some even escape from their tanks at night. Most octopuses live alone and only for one or two years.
